Summary

I am a full stack web developer currently employed by KidsUP, an English after-school care company in Tokyo. I was initially hired as a teacher, and now split my time between teaching and adding features to the seasonal event registration site I was solely responsible for developing.

My primary experience in a professional context is with Ruby on Rails, vanilla CSS/Bootstrap and the subset of AWS services we use in hosting our site. I also have personal experience with Javascript and various developer tools like git, WSL and VSCode. As I currently hold an Engineer/Specialist in Humanities/International Services Visa I will not require visa sponsorship, just assistance procuring the documents for renewal.

For the next step in my journey as a developer, I'm hoping to join an established team to refine the skills I've acquired while working solo. If you think I might be a good fit for your team, please get in touch!

Experience

Web Developer

Kids UP

Nov 2022 - Present (9 months)

I split my time between working as a Native Educator on-site at KidsUP and working on web development projects from home. I was created our current registration site for seasonal schools, and my current responsibilities include maintaining/adding features to/writing documentation for that site, as well as exploring options for a new Setsumeikai registration form and new ways to distribute photos taken during events to parents.

Education

QUT (Queensland University of Technology)

Bachelor of Law/Business, Law/Business

2014 - 2018

Skills

Ruby on Rails • Amazon Web Services (AWS) • Cascading Style Sheets (CSS) • JavaScript • Git • CLI • Zsh • Bash • Microsoft Visual Studio Code • GitHub
